

Edge insulation strips

Data sheet

by getzner
sylomer®

Range of use

Getzner edge insulation strips are made from Sylomer® and are used to border floating screeds. They prevent sound being transmitted from the screed plate into adjacent components such as walls, supports or pipe openings. The polyurethane material Sylomer® retains its elastic material properties during the entire service life of the floor, is free from softeners and is also highly resistant against the oils and greases used on construction sites.

Implementation

Edge insulation strips are available in heights ranging from 100mm to 150mm. The chosen height should at least cover the respective screed thickness and the permitted construction tolerances.

Advantages

- Effective protection against sound transmission (Dff)
- Long-term elastic material properties
- Free from softeners
- Resistant to oils and greases
- Thermally insulating

Edge insulation strips made from Sylomer®

Perfect in combination with
AFM & AFB

Item number	Product	Length	Width	Thickness
44102	Edge insulation strips LIS 100	5,000mm	100mm	8.5mm
44101	Edge insulation strips LIS 150	5,000mm	150mm	8.5mm

The edge insulation strips are available in a range of colours.
